Summary

Data Analyst with a B.Sc. (Honours) in Physics and an ongoing M.Sc. in Mathematics. Leveraging a Google Professional Certificate and advanced statistical knowledge to engineer automated reporting and actionable insights. Skilled in SQL (CTEs, Window Functions), Python (Pandas, Seaborn), Power BI for end-to-end data modeling.

Skills

Data Analysis & BI: SQL (MySQL, BigQuery, DuckDB), Python (Pandas, NumPy, Matplotlib, Plotly, Seaborn, Streamlit, Jupyter), Excel, Tableau, Power BI

Developer Tools & Cloud: Git, GitHub, Streamlit Cloud, Bash Scripting

Certifications: Google Data Analytics Professional Certificate

Education

LPU

M. Sc. in Mathematics (Online) (Ongoing)

- Electives: Finance

Ramjas College, DU

B. Sc. (Hons) in Physics

- Electives: Mathematics

Projects

Banking Sector Stock Analytics Pipeline | Python, Streamlit, Pandas | [Live](#)

[Demo](#) | [GitHub](#)

- Built an ETL pipeline with Parquet data caching to optimize Yahoo Finance (`yfinance`) ingestion speed and eliminate API redundancy.
- Computed quantitative risk/return metrics (Jensen's Alpha, Sharpe Ratio, Beta, RSI) using NumPy and Pandas.
- Deployed an interactive Streamlit Cloud dashboard featuring customizable risk-free rates, Plotly candlestick moving averages, and automated portfolio allocation logic.

HR Analytics Dashboard | Power BI | [GitHub](#)

- Engineered a comprehensive tracking system to transform raw workforce data into interactive insights on attrition, salary parity, and employee satisfaction.
- Designed multi-layered visuals that simplify recruitment & compensation trends for organizational planning.
- Developed custom DAX measures to monitor active employees and departmental attrition.

Data Cleaning & Exploratory Analysis (Goodreads Books Dataset) | SQL

| [GitHub](#)

- Created a multi-stage cleaning pipeline to standardize 10,000+ records, resolving data type inconsistencies & handling duplicate entries via CTEs.
- Implemented advanced queries using Window Functions and Aggregations to rank publication performance & identify top publishers by year.

HR Analytics and Visualization Project | Excel | [GitHub](#)

- Cleaned and prepped raw HR data, creating custom metrics and dynamic pivot tables for detailed analysis.
- Built a single-page, interactive dashboard with visualizations to centralize and automate KPI reporting.
- Identified key trends to support data-driven decisions on retention, compensation & employee well-being.
